LinkedIn Profile

GitHub Profile

Data Analyst with 2+ years in statistical analysis, predictive modeling, & data visualization, transitioning to Generative AI. Expertise in ETL, EDA, and translating complex datasets into actionable business insights within Agile environments.

Hands-on experience building RAG-based AI systems, working with LLMs (LLaMA 3.3), vector databases (Pinecone), & prompt engineering.

Seeking opportunities to combine data analytics expertise with emerging Generative AI technologies to deliver innovative, AI-driven solutions, Curious to learn, driven to build, and passionate about startups.

BE (E&TC): 2020

CGPA: 6.80

(Savitribai Phule Pune University)

PG Program in Data Science & ML

([Certification Course](#)) May 2023-24

([Data Trained Education Pvt. Ltd](#))

TECHNICAL SKILLS:

Programming Languages: Python, SQL, React (Beginner)

Generative AI & LLMs: LangChain, Hugging Face Transformers, RAG Pipelines, Prompt Engineering, LLaMA Models, Groq API

ML & DL: Predictive Modeling, Classification, Regression, Decision Trees, ANN, CNN, RNN, Transformers, PyTorch (Learning), Scikit-learn

Data Visualization Tools: Power BI, Matplotlib, Seaborn

Data Analytics: EDA, Data Mining, Data Visualization, Data Extraction, ETL Pipelines, Statistical Analysis.

Vector Databases & Search: Pinecone, Embeddings (Sentence Transformers)

Backend Development: Flask Rest API (Learning)

Databases: MySQL, SSMS, Vector Databases

Python Libraries: NumPy, Pandas, Seaborn, BS4, Selenium

Application Hosting & Deployment: IIS

PROFESSIONAL EXPERIENCE

Application Support & AI/Data Analyst

Smart I Electronics PVT Ltd., Mumbai, Maharashtra.

May 2025 – Present

- Provide L1/L2 support for business applications, including issue resolution, SQL debugging, log analysis, and performance monitoring.
- Manage **application hosting and deployment on IIS**, including configuration updates, site monitoring, troubleshooting, and ensuring application uptime.
- Develop automated ETL workflows using Python & SQL for data extraction, validation, and error detection.
- Designed and developed a Generative AI-powered RAG-based Chatbot**, integrating LLaMA 3.3-70B, Pinecone, Sentence Transformers, and Flask REST API.
- Built a complete RAG pipeline including web scraping, chunking, Embeddings generation, vector indexing, and top-k semantic retrieval.
- Implemented secure Flask API endpoints with authentication, health checks, and real-time query handling for Chatbot operations.
- Optimized LLM prompts, Embedding's, and retrieval accuracy to improve Chatbot performance and response quality.
- Created monitoring dashboards to track AI pipeline latency, retrieval performance, and application usage patterns.

Data Analyst

Teleperformance, Mumbai, Maharashtra (Freelancing)

Sep 2024 – Dec 2024

- Developed **ETL pipelines** using Python & SQL to automate data extraction, transformation & loading, improving efficiency.
- Optimized **MySQL queries** for large datasets, reducing execution time.
- Test **ML models** for data analysis & predictive insights, enhancing decision-making.
- Tested and validated ETL pipelines**, ensuring data accuracy, consistency & performance optimization.

PG Data Science & ML Course & Data Scientist Internship

May 2023 – May 2024

Data Analyst

Fujitsu Consulting India Pvt Ltd., Pune

Jan 2022 – May 2023

- Executed comprehensive data pre-processing, **cleaning** & wrangling, **enhancing** data quality & accuracy by **25%** for more reliable modelling outcomes.
- Employed advanced data visualization techniques & analytical methods, resulting in a **20%** increase in actionable insights for informed **decision-making**.
- Applied **machine learning** algorithms to extract & communicate key insights for strategic business decisions.
- Developed & implemented predictive models for forecasting using **Python**, driving improved forecasting accuracy & strategic planning.
- Collaborated with cross-functional teams in an **Agile** environment, participating in **sprint** planning, **stand-ups**, & retrospectives to ensure timely delivery of data-driven insights.

PROJECT'S

Capstone Project – Crimes in India

[Colab Notebook](#) | [BI Dashboard](#)

- **Data Integration:** Collected and merged datasets on demographics, GDP, and crime statistics for exploratory analysis.
- **EDA:** Identified crime patterns and correlations using Python and SQL.
- **Clustering:** Applied K-Means to segment districts into Sensitive, Moderate, and Peaceful zones.
- **Visualization:** Built interactive charts and maps to present findings using Power BI and Matplotlib.
- **Insight Generation:** Delivered actionable insights for crime prevention strategies and policy planning.

Credit Risk Analytics (BONDORA BANK):

[Colab Notebook](#) | [BI Dashboard](#)

- **Objective:** Conducted exploratory data analysis (EDA) to identify factors influencing loan default risk. Analyzed client & loan attributes to enhance decision-making for loan approvals & risk management.

Approach:

- **Data Analysis:** Analyzed client demographics and loan attributes using Python and SQL.
- **Modeling:** Applied classification models to assess credit risk and predict default likelihood.
- **Insights:** Generated actionable insights to reduce financial loss and improve loan approval strategies.
- **Impact:** Supported data-driven decision-making for risk management in financial operations.

Image Classification in Manufacturing Industry:

[Colab Notebook](#) | [BI Dashboard](#)

- **Objective:** Automated defect detection in manufacturing using deep learning to improve inspection accuracy & reduce manual effort.

Approach: Built and trained a CNN model with image augmentation; evaluated using confusion matrix and classification report. Explored Vision Transformers for performance comparison. Deployed model in TensorFlow Lite format for industrial application.

- Collected and pre-processed labelled images with augmentation techniques (rotation, flipping, zoom) to improve model generalization.
- Designed CNN architecture using TensorFlow/Keras with dropout layers and SoftMax activation for binary classification (defective/non-defective)
- Trained model using categorical cross-entropy loss and Adam optimizer with Early Stopping & Model Checkpoint callbacks.
- Evaluated performance using confusion matrix, classification report, & visualized training/validation metrics
- Leveraged transfer learning with pretrained CNN models to benchmark performance improvements
- Converted trained model to TensorFlow Lite for deployment on edge devices in manufacturing environments

Bank of Maharashtra Loan Assistant Chat Bot (RAG-Based System):

[Git Repo](#) | [BI Dashboard](#)

- **Objective:** Developed an AI-powered chatbot using RAG architecture to answer loan queries, processing 60+ loan products with Flask, Pinecone, & LLaMA 3.3-70B.

Approach: Built production-ready RAG pipeline: web scraping (BeautifulSoup) → data chunking & cleaning → semantic embeddings (Sentence Transformers) → vector storage (Pinecone) → LLM-powered Q&A (LLaMA 3.3-70B via Groq) with Flask REST API, enabling real-time semantic search across Bank of Maharashtra's loan products with 5-chunk retrieval and temperature-controlled generation

- **Flask REST API:** Developed Flask REST API with authentication, health checks, & query endpoints handling real-time user queries.
- **Web Scraping:** Engineered web scraper extracting loan data from 60+ pages with retry logic and intelligent text chunking (500-char chunks, 100-char overlap).
- **Data Processing:** Implemented 384-dimensional embeddings with top-k retrieval (k=5) and batch processing (50 vectors/batch) for scalable document indexing.
- **RAG pipeline:** Built RAG pipeline with Pinecone vector DB, Sentence Transformers, & Groq's LLaMA 3.3-70B achieving semantic search across 60+ loan schemes.

Tech Stack:

- Python | Flask | Pinecone | Groq API | LLaMA 3.3 | Sentence Transformers | BeautifulSoup | RAG Architecture.

DECLAIRATION:

I declare that all the information in this resume is true to the best of my knowledge and belief. I am committed to providing further documentation if require
